

```
class Hello:
    def __init__(self):
        self.myName="Monty"

    def sayHello(self):
        print "Hello", Self.myName

obj=Hello()
obj.sayHello()
```

```
public class Hello(){
    String myName;

    public Hello(){
        myName="Duke";
    }

    public void sayHello(){
        System.out.println("Hello" + myName);
    }
}

public class Client{
    public static void main(String[] args){
        Hello h = new Hello();
        h.sayHello();
    }
}
```
